RESULTS OF OPERATIONS

The Fund's net assets decreased by \$0.1 million to \$23.8 million from March 31, 2024 to September 30, 2024. The Fund had net sales of \$2.5 million for the period. The portfolio's performance decreased assets by \$2.6 million. Series A units returned -11.3% after fees and expenses for the six-month period ended September 30, 2024. Over the same time period, the Fund's benchmark returned -10.8%. The benchmark is the Bloomberg Galaxy Bitcoin Index (TR) (USD) (the Benchmark or the Index).

The performance of the Fund's other Series is substantially similar to that of Series A units, except for differences in the structure of fees and expenses. For the returns of the Fund's other Series, please refer to the "Past Performance" section.

The following commentary pertains to the results of operations of the CI Galaxy Bitcoin ETF (the Underlying Fund).

Equities shifted course in the third quarter of 2024, with more breadth and volatility than the previous quarter. Index levels pushed higher after briefly pulling back in late July due to a weaker-than-expected labour market. New stimulus measures by China supported emerging markets, and U.S. interest rate policy controlled much of the narrative. The U.S. Federal Reserve Board held interest rates at 23-year highs in July but cut the federal funds rate by 50 basis points in September after some weakness in the labour market.

Bitcoin slightly underperformed U.S. equities, as measured by the S&P 500 Index and the Nasdaq 100 Index. Major U.S. asset managers launched Ethereum spot exchange-traded funds (ETFs), and the U.S. Securities and Exchange Commission approved options trading on Bitcoin ETFs. Bitcoin performance was largely flat over the period, and the launch of Ethereum ETFs in the United States did not attract enough attention to warrant a rally.

As a single-asset fund, the Underlying Fund's performance was driven solely by the performance of Bitcoin.

We increased the Underlying Fund's position in Bitcoin in line with share creations, and we trimmed the Underlying Fund's position in Bitcoin in line with share redemptions.

Overall, the Fund underperformed its benchmark for the period.

RECENT DEVELOPMENTS

The Underlying Fund's mandate is to track the performance of Bitcoin. As such, the Underlying Fund's portfolio is weighted 100% to Bitcoin.

Investor attention has turned to the upcoming U.S. presidential election, with prediction markets revealing no clear expected victor. And while the U.S. presidential election will most certainly influence all asset prices, including cryptocurrencies, investors are also monitoring global monetary easing as a likely boost for riskier assets. With volumes on Bitcoin options surging at \$100,000 strikes, cryptocurrency markets are pricing in high volatility heading into the fourth quarter of 2024.

(1) This information is derived from the Fund's semi-annual and annual financial statements.

(2) Management expense ratio is calculated based on expenses charged to the Fund (excluding commissions and other portfolio transaction costs) and is expressed as an annualized percentage of daily average net assets for the period/year, including the Fund's proportionate share of any underlying fund(s) expenses, if applicable. The Effective HST tax rate is calculated using the attribution percentage for each province based on unitholder residency and can be different from 13%.

(3) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net assets during the period/year, including the Fund's proportionate share of such expenses of any underlying fund(s), if applicable.

(4) The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the fiscal period/year. The higher a Fund's portfolio turnover rate in a period/year, the greater the trading costs payable by the Fund in the period/year, and the greater the chance of an investor receiving taxable capital gains in the period/year. There is not necessarily a relationship between a higher turnover rate and the performance of a Fund. Portfolio turnover rate is calculated by dividing the lesser of the cost of purchases and the proceeds of sales of portfolio securities for the period/year, and excluding cash and short-term investments maturing in less than one year, and before assets acquired from a merger, if applicable, by the average of the monthly fair value of investments during the period/year.

(5) This information is provided for the period(s)/year(s) ended September 30, 2024 and March 31.
