## INVESTMENT OBJECTIVE AND STRATEGIES

The investment objective of the CI Global Quality Dividend Growth Index ETF (the Fund) is to track, to the extent reasonably possible, the price and yield performance of a fundamentally weighted index designed to provide exposure to a broad range of dividend-paying companies with growth and quality characteristics around the developed world, net of expenses. Currently, the Hedged Units of the Fund seek to replicate the performance of WisdomTree Global Quality Dividend Growth CAD Hedged Index (the "Hedged Index"), or any successor there of; and the Non-Hedged Units of the Fund seeks to replicate the performance of WisdomTree Global Quality Dividend Growth CAD Index (the "Non-Hedged Index" and, together with the Hedged Index, the "Indexes"), or any successor there of.

For a complete discussion of the Fund's investment objective and strategies, please refer to the Fund's most recently filed simplified prospectus.

## RISK

The risks of the Fund remain as discussed in the Fund's most recently filed simplified prospectus. The Manager reviews the risk rating for the Fund on an annual basis, at a minimum, based on the methodology mandated by the Canadian Securities Administrators to determine the risk level of the Fund.

## RESULTS OF OPERATIONS

As at December 31, 2024, the Fund's net asset value were \$9.6 million. The Fund had net sales of \$10.2 million for the period. The Fund paid distributions totalling \$0.6 million.

During the period, equity markets rebounded, with the S&P 500 Index rising 25%, hitting an all-time high. Performance was led by communication services and information technology stocks. Financials also performed well as the U.S. Federal Reserve Board (Fed) cut interest rates. The Fed cut its federal funds rate by 100 basis points (bps) over the period, taking the federal funds rate from 5.50% to 4.50%.

Canadian equities, as measured by the S&P/TSX Composite Index, hit an all-time high in 2024, rising 21.7% for the period. The information technology, financials and energy sectors led performance. The Bank of Canada brought its overnight lending rate down by 175 bps, from 5.00% to 3.25%, over the course of the period.

Canadian two-year and five-year bond yields fell 96 bps and 21 bps, to 2.93% and 2.97%, respectively. Conversely, 10-year and 30-year yields rose 13 bps and 31 bps, to 3.21% and 3.31%, respectively. Yield curves reverted to a positive slope as interest rate cuts pulled down front-end yields.

In November, corporate credit spreads (the difference in yields between corporate bonds and government bonds of similar maturity) narrowed to all-time lows in the United States, signalling investor optimism for corporate earnings and the U.S. economy.

Inflation in Canada declined significantly, from 3.4% to 1.9%. In the United States, inflation declined from 3.4% to 2.7%, still well above the Fed's 2% target.

The Fund's holdings are approximately 74% CI U.S. Quality Dividend Growth Index ETF (Non-Hedged), 23% CI International Quality Dividend Growth Index ETF (Non-Hedged) and 3% CI Canada Quality Dividend Growth Index ETF. Its performance was driven by those constituent holdings.

## **RECENT DEVELOPMENTS**

In the United States, the Overnight Index Swap market is pricing in only 35 bps total in interest rate cuts in 2025, with no cuts until June. In Canada, 67 bps in interest rate cuts have been priced in for next year, anticipating a 25-bp cut in both January and June.

Donald Trump's economic plan appears to combine corporate tax cuts with massive tariff increases. If enacted, it could create massive budget deficits (US\$5.8 trillion over 10 years) and would likely result in even higher bond yields due to the higher supply of government bonds issued to finance it. Trump's protectionist plans for raising tariffs would likely generate retaliatory tariffs, which could drive U.S. inflation higher and could seriously damage the Canadian economy. This would be detrimental to both government bonds and corporate bonds and equities.

Slower economic activity than expected would hurt equities and could widen out corporate spreads from historic lows, causing corporate bonds to underperform versus government bonds.

### ***Privatization***

On November 25, 2024, CI Financial Corp. announced that it had entered into a definitive agreement with an affiliate of Mubadala Capital, the alternative asset management arm of Mubadala Investment Company, to acquire all issued and outstanding common shares of CI Financial Corp., other than shares held by members of senior management of CI Financial Corp. who enter into equity rollover agreements. Subject to court and shareholder approvals, regulatory clearances and other customary closing conditions, the transaction is expected to close in the second quarter of 2025. The Manager does not expect the transaction to impact it or the Fund's business, operations or affairs at this time.

(1) This information is derived from the Fund's audited annual financial statements.

(2) Management expense ratio is calculated based on expenses charged to the Fund (excluding commissions and other portfolio transaction costs) and is expressed as an annualized percentage of daily average net assets for the period/year, including the Fund's proportionate share of any underlying fund(s) expenses, if applicable. The Effective HST tax rate is calculated using the attribution percentage for each province based on unitholder residency and can be different from 13%.

(3) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net assets during the period/year, including the Fund's proportionate share of such expenses of any underlying fund(s), if applicable.

(4) The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the fiscal period/year. The higher a Fund's portfolio turnover rate in a period/year, the greater the trading costs payable by the Fund in the period/year, and the greater the chance of an investor receiving taxable capital gains in the period/year. There is not necessarily a relationship between a higher turnover rate and the performance of a Fund. Portfolio turnover rate is calculated by dividing the lesser of the cost of purchases and the proceeds of sales of portfolio securities for the period/year, and excluding cash and short-term investments maturing in less than one year, and before assets acquired from a merger, if applicable, by the average of the monthly fair value of investments during the period/year.

(5) This information is provided for the period ended December 31, 2024.
