RESULTS OF OPERATIONS

The Fund's net assets increased by \$3.0 million to \$3.9 million from December 31, 2023 to June 30, 2024. The Fund had net sales of \$1.7 million for the period. The portfolio's performance increased assets by \$1.3 million. Common Units returned 40.8% after fees and expenses for the six-month period ended June 30, 2024. Over the same time period, the Fund's benchmark returned 40.8%. The benchmark is the Alerian Galaxy Global Cryptocurrency-Focused Blockchain Equity Index (CAD-Hedged) (the Benchmark or the Index).

Global equity markets got off to a strong start in 2024, with the MSCI ACWI Index gaining 13%, driven largely by the United States, which was up 19%. U.S. equities were particularly strong in the information technology sector, which appreciated almost 30%. Artificial intelligence (AI) adoption boosted spending and investment, benefiting U.S. companies and potentially driving growth in China and India. Corporate earnings driven by technological advancements continued to support equity returns.

Signs of a slowdown in economic activity appeared as restrictive monetary policies worked their way through major developed economies with long and variable lags. While U.S. economic growth continued to outperform its peers, a softening became evident in the second quarter of 2024.

While the U.S. Federal Reserve Board left its policy interest rate on hold in June 2024, the global monetary easing cycle began. Central banks elsewhere, including the European Central Bank, the Riksbank (Sweden) and the Swiss National Bank, lowered their key policy interest rates in response to slowing economic growth and moderating inflationary pressures.

Disappointing U.S. inflation data led to fears of a reacceleration during the first quarter of 2024 and resulted in a significant decrease in expectations for interest rate cuts relative to the start of the year. However, more recent data revealed that price pressures were moderating. U.S. labour market data was mixed, but the trend also suggested a slowing.

Election results in Mexico, India, South Africa and Europe had surprising outcomes, triggering considerable repricing across local financial markets. Elections in the United Kingdom and France in particular showed how quickly the political landscape can change.

The Fund performed in line with its benchmark over the period. The Fund's allocations to the consumer discretionary and industrials sectors detracted from performance. The largest individual detractors from the Fund's performance were positions in Applied Digital Corp., HIVE Digital Technologies Ltd. and Hut 8 Mining Corp.

Exposures to the information technology, financials and communication services sectors contributed to the Fund's performance. Top individual contributors to the Fund's performance included holdings in MicroStrategy Inc., CleanSpark Inc. and Core Scientific Inc.

RECENT DEVELOPMENTS

We are cautiously optimistic as we look toward the second half of 2024. Equity markets have been buoyed by the prospect of interest rate cuts by leading central banks as well as the enthusiasm for all things related to the AI boom. We see indications of softer economic activity due to weakening of consumer spending trends. Softer economic growth along with moderating inflationary trends are the leading arguments for lower interest rates. Any extension of the higher interest rate environment may lead to a recalibration of equity valuations.

There is a risk that softer economic activity could coincide with sticky rates of inflation during a period of political volatility. This must be balanced against the prospect of accelerating economic growth, particularly in regions and sectors benefiting from technological innovation and infrastructure investments. The adoption of AI has widespread implications for spending and investment not only within the information technology supply chain but also within those sectors and companies that will benefit from greater efficiency gains. Equity performance for those companies exposed to these developments have benefited U.S. companies, but economies like China and India could see strong equity performance fuelled by recoveries in consumption and advancement in their technological developments. Increased spending from the Asia-Pacific region would help promote growth globally.

Political developments, including elections and policy changes, have also been influencing global markets. Uncertainty surrounding elections in various regions has prompted a more cautious tone among investors and added to market volatility. We expect volatility to persist through the election cycle. Within the Fund, diversification and a strategic approach to regional and sector allocation based on prevailing economic and corporate conditions will be crucial in navigating the evolving market landscape.

(1) This information is derived from the Fund's semi-annual and audited annual financial statements.

(2) Management expense ratio is calculated based on expenses charged to the Fund (excluding commissions and other portfolio transaction costs) and is expressed as an annualized percentage of daily average net assets for the period/year, including the Fund's proportionate share of any underlying fund(s) expenses, if applicable. The Effective HST tax rate is calculated using the attribution percentage for each province based on unitholder residency and can be different from 13%.

(3) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net assets during the period/year, including the Fund's proportionate share of such expenses of any underlying fund(s), if applicable.

(4) The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the fiscal period/year. The higher a Fund's portfolio turnover rate in a period/year, the greater the trading costs payable by the Fund in the period/year, and the greater the chance of an investor receiving taxable capital gains in the period/year. There is not necessarily a relationship between a higher turnover rate and the performance of a Fund. Portfolio turnover rate is calculated by dividing the lesser of the cost of purchases and the proceeds of sales of portfolio securities for the period/year, and excluding cash and short-term investments maturing in less than one year, and before assets acquired from a merger, if applicable, by the average of the monthly fair value of investments during the period/year.

(5) This information is provided for the period(s)/year(s) ended June 30, 2024 and December 31.

(6) Closing market price.

PAST PERFORMANCE

This section describes how the Fund has performed in the past. Remember, past returns do not indicate how the Fund will perform in the future. The information shown assumes that distributions made by the Fund in the period(s)/year(s) shown were reinvested in additional units of the Fund or relevant Series/Class of the Fund, as applicable. In addition, the information does not take into account sales, redemption, distribution or other optional charges that would have reduced returns or performance.

Year-by-Year Returns

The following chart/charts shows/show the Fund's semi-annual and annual performance for each of the period(s)/year(s) shown and illustrates/illustrate how the Fund's performance has changed from period/year to period/year. In percentage terms, the chart/charts shows/show how much an investment made on the first day of each financial period/year would have grown or decreased by the last day of each financial period/year, except where noted.

¹ 2022 return is for the period from April 28, 2022 to December 31, 2022.
