RESULTS OF OPERATIONS

The Fund's net assets decreased by \$27.6 million to \$445.7 million from March 31, 2023 to September 30, 2023. The Fund had net redemptions of \$27.8 million during the period. The portfolio's performance increased assets by \$0.2 million. Series I units returned 0.1% after fees and expenses the six-month period ended September 30, 2023. Over the same time period, the Fund's benchmark returned -1.1%. The benchmark is the S&P/TSX Composite Total Return Index (the Benchmark or the Index).

It was a rough period, with both bonds and equities declining. Yields kept rising as most market participants do not expect an economic recession in the near term. Rating agency Fitch Ratings Inc. downgraded the United States' "risk free" rating. Equities declined following a solid rebound in the first two quarters of 2023. On a year-to-date basis, equities remained strong, outperforming fixed-income securities.

The Fund outperformed its benchmark for the period. An underweight allocation to the materials sector contributed to the Fund's performance, as did overweight allocations to the information technology and health care sectors. Top individual contributors to the Fund's performance included holdings in Canadian Natural Resources Ltd., Suncor Energy Inc., EQB Inc., Trican Well Service Ltd. and Element Fleet Management Corp.

An underweight exposure to the energy sector detracted from the Fund's performance, as did security selection within the information technology sector. The largest individual detractors from the Fund's performance were holdings in Nuvei Corp., Canadian Tire Corp. Ltd., Aritzia Inc., TELUS Corp. and Royal Bank of Canada.

During the period, we increased the Fund's existing positions in Bank of Montreal, The Toronto-Dominion Bank, Canadian Natural Resources Ltd., Enbridge Inc. and Royal Bank of Canada. The Fund holdings in CI Morningstar Canada Value Index ETF, Aritzia Inc., Thomson Reuters Corp., Open Text Corp. and Toromont Industries Ltd. were trimmed.

RECENT DEVELOPMENTS

Equities are better positioned based on our belief of an economic soft landing ahead. This means that an economic slowdown is inevitable, but lower earnings should only be temporary. The U.S. job market is resilient and should continue to be in the coming quarters. However, positive real interest rates and a strong U.S. dollar should at some point affect consumption and earnings. Higher oil prices do not seem to be a big problem as the price of gasoline is holding following the peak demand season.

Canada is in a worse situation as savings accumulated during the COVID-19 pandemic have been depleted and mortgage rates are rising. Most Canadians are refinancing their mortgages from 3% or lower to significantly higher rates. The housing market has slowed, with month-over-month sales reported for September 2023 falling 12%. We expect consumption to slow as Canadians pay more interest.

(1) This information is derived from the Fund's semi-annual and annual financial statements.

(2) Management expense ratio is calculated based on expenses charged to the Fund (excluding commissions and other portfolio transaction costs) and is expressed as an annualized percentage of daily average net assets for the period/year, including the Fund's proportionate share of any underlying fund(s) expenses, if applicable. The Effective HST tax rate is calculated using the attribution percentage for each province based on unitholder residency and can be different from 13%.

(3) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net assets during the period/year, including the Fund's proportionate share of such expenses of any underlying fund(s), if applicable.

(4) The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the fiscal period/year. The higher a Fund's portfolio turnover rate in a period/year, the greater the trading costs payable by the Fund in the period/year, and the greater the chance of an investor receiving taxable capital gains in the period/year. There is not necessarily a relationship between a higher turnover rate and the performance of a Fund. Portfolio turnover rate is calculated by dividing the lesser of the cost of purchases and the proceeds of sales of portfolio securities for the period/year, and excluding cash and short-term investments maturing in less than one year, and before assets acquired from a merger, if applicable, by the average of the monthly fair value of investments during the period/year.

(5) This information is provided for the period(s)/year(s) ended September 30, 2023 and March 31.
