RESULTS OF OPERATIONS

The Fund's net assets decreased by \$5.1 million to \$108.8 million from March 31, 2024 to September 30, 2024. The Fund had net redemptions of \$6.4 million for the period. The portfolio's performance increased assets by \$1.3 million. Series A units returned 0.9% after fees and expenses for the six-month period ended September 30, 2024. Over the same time period, the Fund's benchmark returned 11.4%. The benchmark is a combination of the S&P/TSX Energy Index (GTR) - 50% and the S&P/TSX Materials Index (GTR) - 50% (the Benchmark or the Index).

The performance of the Fund's other Series is substantially similar to that of Series A units, except for differences in the structure of fees and expenses. For the returns of the Fund's other Series, please refer to the "Past Performance" section.

Crude oil prices for both West Texas Intermediate and Brent crude oil were down for the period. Natural gas prices, except for Canadian natural gas, saw improvement.

Prices for many metals saw improvement, despite weakening economic signals from China. The price of copper was up 11%, zinc was up 27% and iron ore was up 5%. Precious metals were up as well, with gold rising approximately 19% and silver up about 26%. Lumber prices were down for the period, declining by almost 16%.

The Fund underperformed its benchmark during the period. Exposure to natural gas producers detracted from the Fund's performance as AECO prices declined 93%. The largest individual detractors from the Fund's performance were holdings in Albemarle Corp. and Headwater Exploration Inc. Lithium producer Albemarle Corp. was negatively affected by declining lithium prices. We liked the company for its position on the lithium cost curve as well as its other businesses able to partially fund the growth in lithium. Heavy oil producer Headwater Exploration Inc. was impacted by declining heavy oil prices, which fell 22%.

With the decline in oil prices, the Fund benefited from its underweight allocation to the energy sector. The Fund's overweight allocation to copper also contributed to performance as copper prices were up 11%. The top individual contributors to the Fund's performance included holdings in Capstone Copper Corp. and Hudbay Minerals Inc., both of which benefited from higher copper and/or gold prices.

We added to the Fund new positions in Advantage Energy Ltd. and Bakkafrøst P/F, and we increased an existing holding in Canfor Corp. We eliminated the Fund holdings in Lithium Americas Corp. and Vallourec SA, and we trimmed the Fund's positions in Shell PLC, BP PLC, ConocoPhillips and Interfor Corp.

RECENT DEVELOPMENTS

Barring any escalation of the conflict in the Middle East, we do not expect oil prices to outpace materials prices in 2025. Ample spare capacity and a desire by the Organization of the Petroleum Exporting Countries to bring back its target of producing two million barrels of oil per day should offset any demand growth for oil.

Despite the economic weakness in China weighing on demand, we remain positive on several commodities. The structural demand remains supportive for copper, especially in the context of increasing difficulty in adding new supply.

The backdrop of high government debt levels, deficit spending and buying by central banks trying to diversify away from the U.S. dollar is supportive for gold prices.

Finally, we remain patient for the impact of lower interest rates on homebuilding activity, which should increase demand for lumber and the performance of lumber company stocks.

(1) This information is derived from the Fund's semi-annual and annual financial statements.

(2) Management expense ratio is calculated based on expenses charged to the Fund (excluding commissions and other portfolio transaction costs) and is expressed as an annualized percentage of daily average net assets for the period/year, including the Fund's proportionate share of any underlying fund(s) expenses, if applicable. The Effective HST tax rate is calculated using the attribution percentage for each province based on unitholder residency and can be different from 13%.

(3) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net assets during the period/year, including the Fund's proportionate share of such expenses of any underlying fund(s), if applicable.

(4) The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the fiscal period/year. The higher a Fund's portfolio turnover rate in a period/year, the greater the trading costs payable by the Fund in the period/year, and the greater the chance of an investor receiving taxable capital gains in the period/year. There is not necessarily a relationship between a higher turnover rate and the performance of a Fund. Portfolio turnover rate is calculated by dividing the lesser of the cost of purchases and the proceeds of sales of portfolio securities for the period/year, and excluding cash and short-term investments maturing in less than one year, and before assets acquired from a merger, if applicable, by the average of the monthly fair value of investments during the period/year.

(5) This information is provided for the period(s)/year(s) ended September 30, 2024 and March 31.
