RESULTS OF OPERATIONS

The Fund's net assets decreased by \$1.3 million to \$124.2 million from March 31, 2023 to September 30, 2023. The Fund had net redemptions of \$10.2 million during the period. The portfolio's performance increased assets by \$8.9 million. Series A units returned 7.3% after fees and expenses for the six-month period ended September 30, 2023. Over the same time period, the Fund's benchmark returned -0.4%. The benchmark is a combination of the S&P/TSX Energy Total Return Index - 50% and the S&P/TSX Materials Total Return Index - 50% (the Benchmark or the Index).

The performance of the Fund's other Series is substantially similar to that of Series A units, except for differences in the structure of fees and expenses. For the returns of the Fund's other Series, please refer to the "Past Performance" section.

Oil outperformed many resource segments during the period, with West Texas Intermediate and Brent crude oil prices up approximately 18% and 20%, respectively. In comparison, base metal performance was modest, with copper down 4%, nickel down 23% and iron ore up 7%. Concerns around China's property markets impacted the demand outlook for base metals.

The Fund outperformed its benchmark for the period. An overweight exposure to exploration and production contributed to the Fund's performance as oil prices rose. The top individual contributors to the Fund's performance were holdings in Cenovus Energy Inc. and NuVista Energy Ltd. Cenovus Energy Inc. benefited from stronger light and heavy oil prices, and from strong refining margins now that Superior and Toledo refineries are ramping. NuVista Energy Ltd. also benefited from strong light oil prices. A move into development mode on its Montney assets should translate into higher returns in 2024.

Overweight allocations to utilities and renewables detracted from the Fund's performance amid investor concerns about interest rates. The largest individual detractors from the Fund's performance were holdings in lumber producer Interfor Corp. and gold producer K92 Mining Inc. Interfor Corp. was negatively impacted by higher interest rates, which weighed on the housing sector. K92 Mining Inc.'s stock price declined as gold prices fell by 7%. The company also had an accident at its mine that resulted in two fatalities, suspending operations for the investigation.

We added new positions in Bunge Ltd. and pipe producer Vallourec SA to the Fund, and increased existing holdings in Nutrien Ltd. and Chevron Corp. Several utilities stocks were eliminated from the Fund, including Northland Power Inc., RWE AG, TransAlta Corp. and Linde PLC. We also trimmed position in natural gas producer ARC Resources Ltd.

RECENT DEVELOPMENTS

We expect to see oil prices normalize in 2024 with more balanced supply and demand characteristics. Prices should stabilize at a level that is still attractive for equities, with high free cash flow. Recent trades better align the Fund with our belief that the upstream sectors are likely to be the part of the supply chain that is best able to capture the benefit of the themes that put pressure on supply.

While the Fund is positioned to benefit from the trends of electrification, decarbonization, urbanization and industrialization of the developing world, we expect volatility into the new year. Uncertainty around the global economic recovery and interest rates, as well as concerns about the Chinese property market could result in base metals (e.g. copper and nickel) price volatility. Steel and iron ore prices may also see heightened volatility.

(1) This information is derived from the Fund's semi-annual and annual financial statements.

(2) Management expense ratio is calculated based on expenses charged to the Fund (excluding commissions and other portfolio transaction costs) and is expressed as an annualized percentage of daily average net assets for the period/year, including the Fund's proportionate share of any underlying fund(s) expenses, if applicable. The Effective HST tax rate is calculated using the attribution percentage for each province based on unitholder residency and can be different from 13%.

(3) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net assets during the period/year, including the Fund's proportionate share of such expenses of any underlying fund(s), if applicable.

(4) The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the fiscal period/year. The higher a Fund's portfolio turnover rate in a period/year, the greater the trading costs payable by the Fund in the period/year, and the greater the chance of an investor receiving taxable capital gains in the period/year. There is not necessarily a relationship between a higher turnover rate and the performance of a Fund. Portfolio turnover rate is calculated by dividing the lesser of the cost of purchases and the proceeds of sales of portfolio securities for the period/year, and excluding cash and short-term investments maturing in less than one year, and before assets acquired from a merger, if applicable, by the average of the monthly fair value of investments during the period/year.

(5) This information is provided for the period(s)/year(s) ended September 30, 2023 and March 31.
