RESULTS OF OPERATIONS

The Fund's net assets decreased by \$121.9 million to \$1,455.4 million from March 31, 2023 to September 30, 2023. The Fund had net redemptions of \$93.7 million during the period. The portfolio's performance increased net assets by \$19.2 million. The Fund paid distributions totalling \$47.4 million. Series A units returned 0.5% after fees and expenses for the six-month period ended September 30, 2023. Over the same time period, the Fund's benchmark returned -0.6%. The benchmark is a combination of the FTSE Canada Universe + Maple All Corporate Bond Total Return Index - 70% (CAD), the ICE BofA U.S. High Yield Total Return Index - 30% (CAD) (the Benchmark or the Index).

The performance of the Fund's other Series is substantially similar to that of Series A units, except for differences in the structure of fees and expenses. For the returns of the Fund's other Series, please refer to the "Past Performance" section.

The U.S. Federal Reserve Board and Bank of Canada surprised the market with two to three more interest rates hikes than had been anticipated a year ago. The persistent rise in government bond yields throughout the period pushed investment-grade and shorter-duration (sensitivity to interest rates) high-yield bond prices lower. The threat of a U.S. regional banking crisis overhung the market in the first quarter of 2023 but abated over the summer. However, public market issuance was light as the inclination to refinance at higher interest rates was low and some companies focused on debt reduction.

The Fund outperformed its benchmark for the period. Security selection contributed to the Fund's performance, as did an overweight exposure to high-yield bonds and shorter duration than the benchmark. A position in an American Airlines Group Inc. (term loan secured overnight financing rate +475 basis points, due 2028), which is secured by its AAdvantage loyalty program contributed to the Fund's performance given its higher yield and lower volatility as reference rates rose. Holdings in floating-rate bonds issued by insurers Lincoln National Corp. and The Hartford Financial Services Group Inc. proved defensive and contributed to the Fund's performance as interest rates increased.

Exposure to Canadian preferred shares detracted from the Fund's performance. We were a little early extending into longer-duration bonds and our new position in Ford Motor Co. 4.75% Jan. 15, 2043 bonds, which was added to capture an eventual upgrade to investment-grade bonds, detracted from the Fund's performance as yields rose. The Fund's Government of Canada bond holdings, which we use to manage duration, detracted from the Fund's performance as interest rates increased.

We added to the Fund a new BBB-rated bond, Paramount Global 4.375% due 2043, as interest rates rose. We believe a stagnant stock price should be the catalyst for credit improvement. A new secured bond position in New Fortress Energy Inc. 6.5% due 2026 was added to the Fund. The company is in the clean energy transition space, contracting with liquefied natural gas exporters to receive cargoes for re-gasification to meet contracted commitments to utilities. A BB+ rated hybrid perpetual bond (7.5%) issued by The Goldman Sachs Group Inc. was also added to the Fund. These securities reset to five-year swaps plus 315.6 basis points, which we believe will cause them to be redeemed early.

A holding in General Electric Co. was eliminated from the Fund. The company spun off its health care division in January 2023, which triggered significant debt repayment. The preferred shares were no longer required in the capital structure and very expensive to maintain. As such, the company announced the partial redemption of 54% of the issue in February, and the remainder was redeemed in mid-September of this year. We sold positions in higher-priced bonds, including the Canadian-dollar-denominated bonds of CES Energy Solutions Corp. (6.375% due 2024), due to relative value concerns. The proceeds were redeployed into higher-yield, lower-priced and longer-duration opportunities.

RECENT DEVELOPMENTS

High borrowing costs impact each high-yield bond issuer differently. Many companies have a combination of fixed-rate and floating-rate debt and are already being affected. Bond coupon rates will be higher going forward, but it will be gradual as many issuers took advantage of very low interest rates to refinance debt and extend maturities in 2021. Nonetheless, this is a market that is more sensitive than not to economic growth. As a result, we have aligned the Fund with market leaders and companies intent on debt reduction.

Various surveys point to an increasing expectation that global inflation can be tamed without a significant contraction in world economic growth. This would be the so-called economic "soft landing," even if it means (in our interpretation) one or two quarters of slightly negative year-over-year growth. This would keep yields higher for longer, but probably also broadly support valuations on riskier assets.

(1) This information is derived from the Fund's semi-annual and annual financial statements.

(2) Management expense ratio is calculated based on expenses charged to the Fund (excluding commissions and other portfolio transaction costs) and is expressed as an annualized percentage of daily average net assets for the period/year, including the Fund's proportionate share of any underlying fund(s) expenses, if applicable. The Effective HST tax rate is calculated using the attribution percentage for each province based on unitholder residency and can be different from 13%.

(3) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net assets during the period/year, including the Fund's proportionate share of such expenses of any underlying fund(s), if applicable.

(4) The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the fiscal period/year. The higher a Fund's portfolio turnover rate in a period/year, the greater the trading costs payable by the Fund in the period/year, and the greater the chance of an investor receiving taxable capital gains in the period/year. There is not necessarily a relationship between a higher turnover rate and the performance of a Fund. Portfolio turnover rate is calculated by dividing the lesser of the cost of purchases and the proceeds of sales of portfolio securities for the period/year, and excluding cash and short-term investments maturing in less than one year, and before assets acquired from a merger, if applicable, by the average of the monthly fair value of investments during the period/year.

(5) This information is provided for the period(s)/year(s) ended September 30, 2023 and March 31.

[†]The Fund had no Series Z outstanding as at September 30, 2023.
