RESULTS OF OPERATIONS

The Fund's net assets decreased by \$312.8 million to \$3,029.1 million from March 31, 2023 to September 30, 2023. The Fund had net redemptions of \$118.7 million during the period. The portfolio's performance decreased assets by \$133.5 million. The Fund paid distributions totalling \$60.6 million. Series A units returned -4.8% after fees and expenses for the six-month period ended September 30, 2023. Over the same time period, the Fund's benchmarks returned -4.5% and -4.5%, respectively. The benchmarks are the FTSE Canada Universe + Maple Bond Total Return Index and the FTSE Canada Universe Bond Total Return (the Benchmark or the Index).

The performance of the Fund's other Series is substantially similar to that of Series A units, except for differences in the structure of fees and expenses. For the returns of the Fund's other Series, please refer to the "Past Performance" section.

By the latter part of the period, inflation had moderated globally, manufacturing activity modestly contracted, industrial production began to roll over, labour markets and consumption began to loosen, and consumers had begun to turn cautious. Despite the slowing macroeconomic backdrop, developed market yields rose substantially and yield curves continued to steepen. In June 2023, the Bank of Canada (BoC) increased short-term interest rates by 25 basis points (bps), with another 25-bp increase in July, and held interest rates steady at its September meeting. At the end of the period, the BoC's overnight interest rate was at 5.00%.

The Fund underperformed its benchmarks for the period. The Fund's higher duration (sensitivity to interest rates) in government bonds than its benchmark detracted from performance. A holding in Province of Ontario 3.65%, Jun. 2, 2033 bonds detracted from performance because of its weighting within the Fund and its duration. The Fund's positions in Province of Ontario 2.55%, Dec. 2, 2052 and Government of Canada 3.50%, Dec. 1, 2045 bonds also detracted from performance. These two longer-duration bonds underperformed as yields rose.

An overweight exposure to corporate bonds contributed to the Fund's performance as they outperformed government debt. Security selection within corporate bonds also contributed to the Fund's performance. Notable individual contributors to the Fund's performance included additional tier 1 (AT1) bonds issued by General Electric Co. and PNC Financial Services Group Inc. General Electric Co.'s AT1 bond was no longer required in its capital structure and was expensive to maintain. The company announced the partial redemption of 54% of the issue in February 2023, and the remainder was redeemed in mid-September. PNC Financial Services Group Inc.'s AT1 bond had a high floating rate and was priced near par as the company indicated it may redeem it. The bond remains outstanding but the high yield and protection from rising interest rates resulted in positive returns. A U.S.-dollar AT1 (8.125%, Oct. 31, 2082) bond issued by The Toronto-Dominion Bank (TD Bank) also contributed to the Fund's performance. The bond's high coupon and relative steady price generated positive returns. TD Bank had planned to buy U.S. regional bank First Horizon Corp. but terminated the acquisition, which left TD Bank with excess capital, thus supporting its AT1 securities.

A new position in Canada Housing Trust No. 1 3.95%, Jun. 15, 2028 bonds was added to the Fund with the proceeds from the sale of a holding in Province of Ontario 2.90%, Jun. 2, 2028 bonds because the Canada Housing Trust bond carries lower risk. We also added a new position in West Edmonton Mall Property Inc. 7.791%, Oct. 4, 2027 bonds. This first mortgage bond was added to the Fund given the strong operating performance and better covenant package compared to the previous issuance. An existing position in Province of Ontario 3.65%, Jun. 2, 2033 bonds was increased and later trimmed.

RECENT DEVELOPMENTS

Inflation continues to decline, but core measures remain elevated compared to the BoC's target. Leading economic indicators point to risk of recession, but labour markets continue to be buoyant. It is unclear whether there will be another interest rate increase in the coming months, but given the lagged impact of monetary policy, we believe that we are likely at or near the terminal rate. The U.S. Federal Reserve Board (Fed) increased the target rate for inflation 25 bps in July 2023. The Fed remains vigilant on inflation but chooses to err on the side of caution while monitoring the effects of restrictive interest rates on the U.S. economy.

The Fund has a longer-duration bias as interest rates remain near cycle highs. The yield curve inversion combined with leading economic indicators point towards yields eventually heading lower. Interest rates are unlikely to move in a straight line, but the risk/reward opportunity of maintaining longer duration appears attractive.

A slow but positively growing economy provides a good environment for corporate bonds. However, as the economy slows further, our strategy will be to improve the Fund's overall credit quality. While this reduces the Fund's running yield modestly, it provides an opportunity to add higher-volatility credits. We believe that BBB-rated issuers have improved their credit metrics in the past couple of years, and this should provide an attractive entry point if our thesis for spread-widening occurs.

(1) This information is derived from the Fund's semi-annual and annual financial statements.

(2) Management expense ratio is calculated based on expenses charged to the Fund (excluding commissions and other portfolio transaction costs) and is expressed as an annualized percentage of daily average net assets for the period/year, including the Fund's proportionate share of any underlying fund(s) expenses, if applicable. The Effective HST tax rate is calculated using the attribution percentage for each province based on unitholder residency and can be different from 13%.

(3) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net assets during the period/year, including the Fund's proportionate share of such expenses of any underlying fund(s), if applicable.

(4) The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the fiscal period/year. The higher a Fund's portfolio turnover rate in a period/year, the greater the trading costs payable by the Fund in the period/year, and the greater the chance of an investor receiving taxable capital gains in the period/year. There is not necessarily a relationship between a higher turnover rate and the performance of a Fund. Portfolio turnover rate is calculated by dividing the lesser of the cost of purchases and the proceeds of sales of portfolio securities for the period/year, and excluding cash and short-term investments maturing in less than one year, and before assets acquired from a merger, if applicable, by the average of the monthly fair value of investments during the period/year.

(5) This information is provided for the period(s)/year(s) ended September 30, 2023 and March 31.
