RESULTS OF OPERATIONS

The Fund's net assets decreased by \$86.1 million to \$907.5 million from March 31, 2023 to September 30, 2023. The Fund had net redemptions of \$75.6 million during the period. The portfolio's performance decreased assets by \$10.4 million. The Fund paid distributions totalling \$0.1 million. Series A units returned -2.1% after fees and expenses for the six-month period ended September 30, 2023. Over the same time period, the Fund's benchmark returned -0.5%. The benchmark is the MSCI EAFE Total Return Index (the Benchmark or the Index).

The performance of the Fund's other Series is substantially similar to that of Series A units, except for differences in the structure of fees and expenses. For the returns of the Fund's other Series, please refer to the "Past Performance" section.

During the period, equity markets faced rising energy prices, slowing global growth and expectations of higher interest rates for longer. Reflecting on these concerns, investors sold off stocks towards the end of the period, and equity markets retrenched. International developed and developing market stocks, as defined by the MSCI ACWI ex-USA Index, declined 1.5% in Canadian-dollar terms.

The Fund underperformed its benchmark for the period. Stock selection within the financials, industrials and information technology sectors detracted from the Fund's performance, as did an overweight position in the information technology sector. The largest individual detractors from the Fund's performance were holdings in Worldline SA, NICE Ltd. and Essity AB. Worldline SA reported adjusted operating profit of 519 million euros for the first half of 2023, up 13.4% versus the same period last year. The company had good traction in new customer wins in its largest segment, merchant services. Despite strong operational performance, the company's shares were down on concerns that retail spending would slow. NICE Ltd. announced higher profit and revenues in its second quarter of 2023 and raised its earnings forecast for fiscal 2023. However, the company's shares declined on news that cloud-computing revenue growth slowed quarter over quarter as the uncertain macroeconomic environment impacted consumption-based contracts. Essity AB delivered disappointing second-quarter 2023 adjusted earnings results as a result of salary inflation and higher marketing costs in its consumer goods segment. In the second half of 2023, the company's management stated that promotional activity would continue in the company's consumer unit, but that the impact on overall pricing should be smaller.

Stock selection in the communication services, health care and energy sectors contributed to the Fund's performance. Top individual contributors to the Fund's performance included holdings in Galp Energia SGPS SA, Indus Towers Ltd. and Grifols SA. Galp Energia SGPS SA announced a net profit of 508 million euros in the first six months of 2023, 21% more than in the same period of 2022. Oil and gas companies, including Galp Energia SGPS SA, have benefited from the nearly 30% rise in the price of crude oil. Indus Towers Ltd. is the largest telecom tower company in the world outside China. The Indian government recently agreed to take an equity stake in Vodafone Idea Ltd. (a significant customer for Indus Towers), allowing Vodafone Idea Ltd. to refinance debt and free up cash to pay vendors. As a result, Indus Towers Ltd. reported better-than-anticipated results, primarily on better collections from Vodafone Idea Ltd. Grifols SA announced total revenue increases to 3,225 million euros, up 14.8%, in the first six months of 2023, driven by growth in its biopharma unit.

RECENT DEVELOPMENTS

Although a tight labour market has benefited workers through higher wages, persistent inflation, elevated levels of debt, declining savings and high interest rates have eroded consumers' purchasing power. The higher oil price has also increased inflationary concerns. Higher oil prices also feed into the cost of goods through higher transportation and production costs.

Global economic growth remains positive, but higher borrowing costs and tighter credit availability have led to declining activity. Some areas of the world are doing better, while others are closer to a recession. In the developed world, rising interest rates and higher energy costs are expected to lead to a contraction in the United States, Continental Europe and the United Kingdom in the coming year. India has been an area of strength with improving growth and high, but declining inflation. China's economy has slowed, with a property market crisis, aging demographics and high youth unemployment presenting significant challenges to its economic growth potential. Geopolitical risks also continue to weigh on global economic activity.

(1) This information is derived from the Fund's semi-annual and annual financial statements.

(2) Management expense ratio is calculated based on expenses charged to the Fund (excluding commissions and other portfolio transaction costs) and is expressed as an annualized percentage of daily average net assets for the period/year, including the Fund's proportionate share of any underlying fund(s) expenses, if applicable. The Effective HST tax rate is calculated using the attribution percentage for each province based on unitholder residency and can be different from 13%.

(3) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net assets during the period/year, including the Fund's proportionate share of such expenses of any underlying fund(s), if applicable.

(4) The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the fiscal period/year. The higher a Fund's portfolio turnover rate in a period/year, the greater the trading costs payable by the Fund in the period/year, and the greater the chance of an investor receiving taxable capital gains in the period/year. There is not necessarily a relationship between a higher turnover rate and the performance of a Fund. Portfolio turnover rate is calculated by dividing the lesser of the cost of purchases and the proceeds of sales of portfolio securities for the period/year, and excluding cash and short-term investments maturing in less than one year, and before assets acquired from a merger, if applicable, by the average of the monthly fair value of investments during the period/year.

(5) This information is provided for the period(s)/year(s) ended September 30, 2023 and March 31.
