RESULTS OF OPERATIONS

The Fund's net assets decreased by \$0.6 million to \$25.6 million from March 31, 2024 to September 30, 2024. The Fund had net redemptions of \$2.0 million for the period. The portfolio's performance increased assets by \$1.4 million. Series A units returned 5.9% after fees and expenses for the six-month period ended September 30, 2024. Over the same time period, the Fund's benchmark returned 8.2%. The benchmark is a combination of the S&P/TSX Composite Index (GTR) - 60% and the FTSE Canada Universe Bond Index (TR) - 40% (the Benchmark or the Index).

The performance of the Fund's other Series is substantially similar to that of Series A units, except for differences in the structure of fees and expenses. For the returns of the Fund's other Series, please refer to the "Past Performance" section.

With inflation easing, central bankers in many economies began lowering interest rates. Global economic activity continued to slow. During the period, investors began to rotate into interest rate-sensitive and commodity-oriented sectors.

The Fund underperformed its benchmark for the period. The Fund's allocation to equities detracted from the Fund's relative performance as equities underperformed their benchmark. An overweight allocation to U.S. health care stocks and an underweight allocation to the Canadian materials sector detracted from the Fund's performance. Notable individual detractors from the Fund's performance included holdings in Royal Bank of Canada and Canadian Imperial Bank of Commerce as banks performed well as lower interest rates eased credit concerns. A holding in Shopify Inc. detracted from the Fund's performance after we trimmed the Fund's position in the company prior to it announcing its results, which were more resilient than expected.

The Fund's allocation to bonds contributed to performance. Stock selection within the industrials sector contributed to the Fund's performance, as did an underweight exposure to the energy sector. Top individual contributors to the Fund's performance included holdings in NVIDIA Corp. and Element Fleet Management Corp. NVIDIA Corp.'s stock performed well amid strong demand for its chips. Element Fleet Management Corp. posted strong results and an improved forecast.

We added to the Fund position in JPMorgan Chase & Co. based on its quality. An existing holding in Cenovus Energy Inc. was increased to raise the Fund's Canadian energy sector exposure. The Fund's position in Shell PLC was eliminated to consolidate energy positions into Canadian holdings. A holding in U.S. Treasury 1.875% Feb. 15, 2041 bonds was trimmed to take profit.

RECENT DEVELOPMENTS

We expect to see a slower pace of interest rate cuts in the United States, with a lower magnitude of cuts. Economic activity is moderating but remains intact. The Fund is neutral in its asset allocation, which will continue until we get greater clarity on economic outcomes.

(1) This information is derived from the Fund's semi-annual and annual financial statements.

(2) Management expense ratio is calculated based on expenses charged to the Fund (excluding commissions and other portfolio transaction costs) and is expressed as an annualized percentage of daily average net assets for the period/year, including the Fund's proportionate share of any underlying fund(s) expenses, if applicable. The Effective HST tax rate is calculated using the attribution percentage for each province based on unitholder residency and can be different from 13%.

(3) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net assets during the period/year, including the Fund's proportionate share of such expenses of any underlying fund(s), if applicable.

(4) The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the fiscal period/year. The higher a Fund's portfolio turnover rate in a period/year, the greater the trading costs payable by the Fund in the period/year, and the greater the chance of an investor receiving taxable capital gains in the period/year. There is not necessarily a relationship between a higher turnover rate and the performance of a Fund. Portfolio turnover rate is calculated by dividing the lesser of the cost of purchases and the proceeds of sales of portfolio securities for the period/year, and excluding cash and short-term investments maturing in less than one year, and before assets acquired from a merger, if applicable, by the average of the monthly fair value of investments during the period/year.

(5) This information is provided for the period(s)/year(s) ended September 30, 2024 and March 31.
