INVESTMENT OBJECTIVE AND STRATEGIES

The investment objective of the CI WisdomTree Canada Quality Dividend Growth Index Fund (the Fund) is to track, to the extent reasonably possible, the price and yield performance of the WisdomTree Canada Quality Dividend Growth Index (the Benchmark or the Index), before fees and expenses.

To achieve its investment objective, the Fund invests all or substantially all of its assets in Non-Hedged units of CI WisdomTree Canada Quality Dividend Growth Index ETF (the Underlying Fund).

For a complete discussion of the Fund's investment objective and strategies, please refer to the Fund's most recently filed simplified prospectus.

RISK

The risks of the Fund remain as discussed in the Fund's most recently filed simplified prospectus. The Manager reviews the risk rating for the Fund on an annual basis, at a minimum, based on the methodology mandated by the Canadian Securities Administrators to determine the risk level of the Fund.

RESULTS OF OPERATIONS

As at March 31, 2024, the Fund's net asset value were \$6.6 million. The Fund had net sales of \$6.4 million during the period. The portfolio's performance increased assets by \$0.2 million.

The following commentary pertains to the results of operations of the CI WisdomTree Canada Quality Dividend Growth Index ETF (the Underlying Fund).

During the period, central banks continued to tighten monetary policy to combat inflation. The Bank of Canada (BoC) raised its overnight rate by 50 basis points (bps) to 5.00%. The U.S. Federal Reserve Board (Fed) raised the federal funds rate by 75 bps to 5.50%. Inflation in Canada declined from 5.2% to 2.8%. The United States showed a similar trajectory, with inflation declining to 3.2% from 6.0%. Yield curves remained inverted, meaning yields on shorter-term bonds were higher than those on longer-term bonds.

Global stock markets exhibited varied performances, with significant events influencing different sectors and regions. Overall, the global equity market landscape was characterized by its resilience in the face of lingering economic uncertainties and sector-specific dynamics. Investors continued to navigate the complexities of higher interest rates, inflationary pressures and geopolitical issues, which influenced market sentiment and investment strategies.

U.S. equity markets fluctuated due to ongoing economic concerns, including inflation and interest rates. Mega-capitalization information technology companies generated very strong gains. European stocks benefited from a rebound in economic activity, having been among the first to decline earlier in the period. Asian equity markets were impacted by varying economic recovery rates across the region. Chinese equities responded to government stimulus, and Japan's equity market reacted to monetary normalization efforts by the Bank of Japan, producing strong returns.

The Fund's is in existence for less than 12 consecutive months and, therefore, no performance information is available.

RECENT DEVELOPMENTS

Despite a stronger-than-expected economy over the last year, economic conditions have begun to moderate. The Canadian economy has so far escaped recession, but we believe leading indicators, rising unemployment and consumers stressed by higher interest rates and inflation pose a risk to economic growth in 2024. The BoC has indicated that it will likely start cutting interest rates in mid-2024, with market participants anticipating at least two interest rate cuts in 2024. Given the trend in inflation and vulnerabilities in the economy, we expect that inflation may continue to come in lower than expected. Over the next several months, we believe vulnerabilities among Canadian households may necessitate the BoC cutting interest rates more quickly than anticipated.

(1) This information is derived from the Fund's audited annual financial statements.

(2) Management expense ratio is calculated based on expenses charged to the Fund (excluding commissions and other portfolio transaction costs) and is expressed as an annualized percentage of daily average net assets for the period/year, including the Fund's proportionate share of any underlying fund(s) expenses, if applicable. The Effective HST tax rate is calculated using the attribution percentage for each province based on unitholder residency and can be different from 13%.

(3) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net assets during the period/year, including the Fund's proportionate share of such expenses of any underlying fund(s), if applicable.

(4) The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the fiscal period/year. The higher a Fund's portfolio turnover rate in a period/year, the greater the trading costs payable by the Fund in the period/year, and the greater the chance of an investor receiving taxable capital gains in the period/year. There is not necessarily a relationship between a higher turnover rate and the performance of a Fund. Portfolio turnover rate is calculated by dividing the lesser of the cost of purchases and the proceeds of sales of portfolio securities for the period/year, and excluding cash and short-term investments maturing in less than one year, and before assets acquired from a merger, if applicable, by the average of the monthly fair value of investments during the period/year.
