RESULTS OF OPERATIONS

The Fund's net assets increased by \$2.1 million to \$125.9 million from March 31, 2021 to September 30, 2021. The Fund had net sales of \$3.9 million during the period. The portfolio's performance increased assets by \$2.7 million. The Fund paid distributions totalling \$4.5 million. Class A units returned 2.0% after fees and expenses for the six-month period ended September 30, 2021. Over the same time period, the Fund's benchmark returned 0.5%. The benchmark is the Bloomberg U.S. Securitized MBS/ABS/CMBS and Covered Total Return Index (USD) (the Benchmark or the Index).

The performance of the Fund's other Series is substantially similar to that of Series A units, except for differences in the structure of fees and expenses. For the returns of the Fund's other Series, please refer to the "Past Performance" section.

Major macroeconomic events during the period included the emergence of the COVID-19 delta variant, a rise in more persistent inflationary pressures and the U.S. Federal Reserve Board's announcement that a tapering of asset purchases may soon be warranted. The U.S. Treasury yield curve flattened as longer-term interest rates decreased amid concerns that the COVID-19 delta variant could slow down economic growth. U.S. corporate earnings continued to beat analyst estimates, which aided the performance of corporate debt sectors.

The Fund outperformed its benchmark for the period. Asset allocation was the primary driver of outperformance. The Fund held an overweight exposure to credit risk, which contributed to performance as the global economy continued to grow, and both consumer and corporate balance sheets remained healthy. Asset-backed securities contributed to the Fund's performance as well. Agency mortgage-backed securities held in the Fund detracted from performance as a result of elevated levels of interest rate volatility.

RECENT DEVELOPMENTS

We expect continued but decelerating U.S. economic expansion heading into next period, while noting that corporate earnings growth rates may be close to their highs for the cycle. With the latest consumer price index print showing a year-over-year increase of 5.3%, we remain concerned about inflation and continue to closely monitor components of the index for indicators of whether it should remain a concern in the longer term or return to more normal levels next period. We believe that interest rates have remained low largely as a result of accommodative fiscal and monetary policies, and believe that Treasury yields are likely headed higher in the intermediate term. With corporate credit spreads near all-time lows, we believe that structured credit offers better risk-adjusted returns with less interest rate risk than corporate bonds.

Registered office address

(1) This information is derived from the Fund's semi-annual and annual financial statements.

(2) Management expense ratio is calculated based on expenses charged to the Fund (excluding commissions and other portfolio transaction costs) and is expressed as an annualized percentage of daily average net assets for the period, including the Fund's proportionate share of any underlying fund(s) expenses, if applicable. The Effective HST tax rate is calculated using the attribution percentage for each province based on unitholder residency and can be different from 13%.

(3) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net assets during the period, including the Fund's proportionate share of such expenses of any underlying fund(s), if applicable.

(4) The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the fiscal period. The higher a Fund's portfolio turnover rate in a period, the greater the trading costs payable by the Fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a higher turnover rate and the performance of a Fund. Portfolio turnover rate is calculated by dividing the lesser of the cost of purchases and the proceeds of sales of portfolio securities for the period, and excluding cash and short-term investments maturing in less than one year, and before assets acquired from a merger, if applicable, by the average of the monthly fair value of investments during the period.

(5) This information is provided for the period ended September 30, 2021 and the years ended March 31.
