RESULTS OF OPERATIONS

The Fund's net assets increased by \$2.7 million to \$29.2 million from March 31, 2024 to September 30, 2024. The Fund had net sales of \$1.5 million for the period. The portfolio's performance increased assets by \$1.2 million. Series A units returned 3.4% after fees and expenses for the six-month period ended September 30, 2024. Over the same time period, the Fund's benchmark returned 6.6%. The benchmark is the MSCI EAFE Index (NTR) (the Benchmark or the Index).

The performance of the Fund's other Series is substantially similar to that of Series A units, except for differences in the structure of fees and expenses. For the returns of the Fund's other Series, please refer to the "Past Performance" section.

Central bankers around the world began lowering interest rates as inflationary forces diminished. In contrast, the Bank of Japan raised its interest rates from previously negative territory. There was heightened political uncertainty related to multiple upcoming elections in several regions, including the upcoming U.S. presidential election. Geopolitical uncertainty continued with conflicts in Ukraine and escalating conflict in the Middle East.

The Fund underperformed its benchmark for period. Currency positioning was the primary detractor from the Fund's performance as the Canadian dollar declined against the euro and British pound. Stock selection within the health care sector detracted from the Fund's performance, as did an overweight exposure to the information technology sector. The largest individual detractors from the Fund's performance were holdings in Disco Corp. and ASML Holding NV. Disco Corp. had challenges in its chip sales to China amid slowing demand. Similar to Disco Corp., ASML Holding NV was affected by slowing chip manufacturing given the slack in end-market demand.

Security selection in the consumer discretionary sector contributed to the Fund's performance. An underweight exposure to Japan also contributed to the Fund's performance. Top individual contributors to the Fund's performance included holdings in Hitachi Ltd., Industria de Diseno Textil SA and SAP SE. Hitachi Ltd. benefited from its exposure to both electrification and green energy themes. Industria de Diseno Textil SA's stock rose based on its cost discipline and consistent sales despite a difficult retail environment. SAP SE's continued adoption of cloud-computing technologies led to its solid outlook.

We added to the Fund position in Northern Star Resource Ltd. to add gold exposure to the Fund as a hedge against geopolitical risks. An existing holding in SAP SE was increased based on the company's continued strong operating growth and promising runway. A holding in Sony Group Corp. was eliminated from the Fund amid slowing demand. A holding in Novo Nordisk AS was trimmed as the company receives political pressure to reduce its pricing. The company has also seen some production shortfalls.

RECENT DEVELOPMENTS

We believe that interest rates will continue to move lower, but at a slower pace than anticipated. The global economy has proven to be more resilient than expected. The Fund has been positioned with exposures in previously underperforming areas of the market.

(1) This information is derived from the Fund's semi-annual and annual financial statements.

(2) Management expense ratio is calculated based on expenses charged to the Fund (excluding commissions and other portfolio transaction costs) and is expressed as an annualized percentage of daily average net assets for the period/year, including the Fund's proportionate share of any underlying fund(s) expenses, if applicable. The Effective HST tax rate is calculated using the attribution percentage for each province based on unitholder residency and can be different from 13%.

(3) The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net assets during the period/year, including the Fund's proportionate share of such expenses of any underlying fund(s), if applicable.

(4) The Fund's portfolio turnover rate indicates how actively the Fund's portfolio advisor manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the fiscal period/year. The higher a Fund's portfolio turnover rate in a period/year, the greater the trading costs payable by the Fund in the period/year, and the greater the chance of an investor receiving taxable capital gains in the period/year. There is not necessarily a relationship between a higher turnover rate and the performance of a Fund. Portfolio turnover rate is calculated by dividing the lesser of the cost of purchases and the proceeds of sales of portfolio securities for the period/year, and excluding cash and short-term investments maturing in less than one year, and before assets acquired from a merger, if applicable, by the average of the monthly fair value of investments during the period/year.

(5) This information is provided for the period(s)/year(s) ended September 30, 2024 and March 31.
